Cup Recycling

We've manufactured a range of bins specifically designed for the collection of disposable cups and liquid.

The Eco Cup Recycling Unit offers the same great level of quality but with an eco-friendly design that features only three collection tubes and the capacity to collect three litres of liquid waste.

We've modified our standard cup bins to accommodate our customer requests; including full wrap vinyl artwork, a metal flap to the lid and the incorporation of logos or company colours.

Available with six internal collection tubes, the Deluxe Cup Recycling Unit has the capacity to collect up to 430 large disposable cups and 5 litres of liquid waste. This efficient way of collecting cups reduces their volume by up to 75%. Shaped like a take away cup, we think this design is eye catching and will encourage users to accurately dispose of their waste.

Design

We've developed our Eco unit with perforations to make the contents visible, ideal for secure environments.

Each unit is manufactured from galvanised steel with a rolled circular body and a vacuum formed durable plastic lid. The cup collection circular apertures are 95mm to ensure even the largest disposable cup can fit.
