Grit Bin Range

Heavy duty grit bins manufactured from glass fibre composite or plastic, designed to keep public areas safe.

The SFG/8 is 224 litres and a popular choice among councils and local authorities due to its hard wearing design.

The SFG/11 is tough and durable, manufactured with a lightweight core and coated in high impact strength glass fibre composite.

The RG/11 is a larger version of our glass reinforced plastic range, with a 308 litre capacity. The sloped lid prevents heavy snow and ice from building up on top of the bin, making it the ideal choice for the roadside.

Additional equipment is also available separately, such as bags of grit salt and shovels.

Looking for something different? The RG/6 Grit Bin in Pastel Blue is manufactured with style and durability in mind. The pastel shade adds a splash of colour to its surroundings, and allows the grit bin to look more like a feature piece.
