Can software influence your organisation's health and safety culture?

We think it can. The UK building and construction sector currently has around 2.3 million employees to keep safe and with the many hazardous occupations involved this is no easy task! Last year 28% of all recorded fatalities occurred in the construction sector.

What more can be done? Louise Perryman, Director at Elmstone Systems Ltd, believes that implementing a cloud-based EHS solution can help by supporting efforts to embed a strong company health and safety culture.

"Over the last five years, we have seen increased awareness of the benefits that technology can offer the construction sector. BIM has been increasingly adopted in some organisations but many problems remain as project size plus price-based competitive tendering increase complexity whilst encouraging contractors to cut corners. Health and safety should not be one of those corners."

So, what should you look for to help your business develop the best possible Health and Safety culture?

"Any system you choose should be easy to use, integrated, quick to implement and effective in supporting the target of zero harm" says Louise. *"It should have a common look and feel so that once you know one part of the system, it's a small step to start using new functions. It should be an enabler, making the task simpler and producing a better result. Ultimately this makes the investment very cost effective and reduces the chances of fines and reputational damage through bad H&S practice and injuries"*

Make sure your chosen system has the potential to make your employees safer - once they understand this, they are more likely to 'feed' it with accurate data such as incident and inspections reports and good saves. If it's been implemented correctly, this should start to show month on month in a downward curve in the accident charts and a steady increase in reporting of near misses.

Mirashare does all of the above and has the advantage of initially being designed together with EHS professionals. It has a loyal customer base, from global pharmaceutical manufacturer Pfizer to prestigious niche specialists like PAYE Stone Restoration. A recent customer testimonial states: 'Overall, Mirashare has positively influenced a better H&S culture, improved compliance and ensured high H&S standards are confluent throughout the business'. You can read more about it on the Mirashare website.

Mirashare

Health and safety cloud based software to meet today's challenges

Key Benefits

- **Easy to use and intuitive**
- **Reduced costs**
- **Encourages increased employee engagement**
- **Increased productivity**
- **Reduced injury rates**
- **Enhanced risk management**
- **Powerful analytics**
- **Meaningful trending**
- **Real-time information**
- **Reliable solution**
- **Improved operational control**
- **Fosters Leadership accountability & ownership**
- **Improved reputation**

Mirashare is a cloud-based software suite catering to a wide variety of needs, from Inspection Audits and Risk Management, to Incident and Near Miss reporting using the latest Mobile technology (IOS & Android). Our wide choice of modules enables an organisation to benefit from features that go beyond health and safety, to support business improvement, control and compliance.

Mirashare helps to create an environment where EHS is part of the **culture** – a culture where all employees are engaged in driving improvements in EHS performance. Our mobile incident reporting App means that you can report an incident or near miss from anywhere, at anytime, in an instant. Keeping people informed, aware & alert, keeping people safe.

Mirashare is provided by **Elmstone Systems Limited**, a software company who have been delivering first class products using cutting edge technology for the last 20 years. Our experienced and knowledgeable team are skilled not only in our Mirashare software, but also in EHS management practice. We work with you to make sure that Mirashare fits your approach, enabling your teams to drive stronger engagement in creating a safer and healthier working environment.

Mirashare modules include:

Incident & Near Miss | Inspection Audits | Action Tracking | Risk Assessment | Good Saves | Change Control
Facility Requests | DSE Assessment | Root Cause Analysis | Chemical Approval | Suggestions Box | Scorecard

20 YEAR ANNIVERSARY
Delivering Quality Products
Using Cutting Edge Technology
