

Flexinap helps to ensure your drivers are properly alert and rested, on the road.

The Flexinap device monitors the drivers' face for signs of fatigue and distraction, helping to keep them safe while driving.

Smart safety

Expert analysis of drivers who fall asleep at the wheel indicates that often they are unaware of how tired they were before the incident occurred.

“One in six crashes resulting in death or injury on major roads are fatigue related.”

Loughborough University

Flexinap acts as an integrated safety service alongside Flexicam to ensure drivers know they have to take a break if they exhibit the first warning signs of tiredness. Flexinap software recognises the signs that a driver is becoming fatigued and will sound a warning when it detects a problem.

Flexinap can also detect distracted driving, such as when the driver looks away from the road for a significant length of time, or even brings a mobile phone to their ear or are eating at the wheel.

The clever device monitors eye movement and head angle to protect drivers on the road. Should the driver set off the automatic alert, this will also notify the fleet manager who can assess any issues from their fleet dashboard.
