Wheelie Bin Covers

Hide unsightly wheelie bins with our stylish range of galvanised steel or glass fibre composite bin covers.

The MWB is manufactured from British sourced galvanised steel and can house 120, 140 or 240 litre wheelie bins - ideal for high traffic areas.

The BWB is part of our Barnsley Bin range, available as a single or dual unit. The economic manufacturing process ensures a high quality product at a competitive price.

The Recyclo is a wheelie bin cover version of the Mini Cyclo Litter Bin; combining the durability of glass fibre composite with the strong, smooth finish of glass reinforced plastic. These brightly coloured units look great on their own but can be grouped together to form an attractive recycling station. The GFC manufacture protects these covers from salt corrosion.

The Royal Parks wheelie bin cover is manufactured with Iroko Hardwood slats and is ideal for use in green spaces.

All of our wheelie bin covers can be customised to suit your needs. Available with a choice of apertures, and additional options such as gold beading and your choice of artwork to the front and sides of the unit.
